TDARX Helps Small to Mid-Sized Businesses Prepare for the End of Windows XP and Office 2003 Support

Leading Unified Communications Provider Delivers a Migration Path to New Technology

WINSTON SALEM, NC – August 26, 2013 - TDARx, Inc., a leader in unified communications, announced today that the company is launching an initiative to help prepare small to mid-sized businesses (SMBs) migrate from Windows XP and the Office 2003 suite of programs to more sustainable solutions. Many SMBs have relied heavily on both these solutions to run their businesses, but after ten years of support these programs will no longer be supported. According to Microsoft, Windows XP SP3 and Office 2003 will completely go out of support on April 8, 2014.

This change has dramatic implications for the business world. It means that many businesses that were merely running outdated software will now be powering their businesses with obsolete technology. Aside from the inability to access support and solve software issues as they arise, this change means that businesses who continue to utilize these tools will be

exposed to unnecessary security risks. For example, unsupported and unpatched environments are extremely vulnerable to outside threats and if a company is unable to assure that its customers' data is properly protected, it may result in public notification of the organization's inability to maintain its systems and data integrity. SMBs need customers more than ever and the absolute last thing an SMB would want to do, would be to publicly inform their customers that they cannot promise that their data is secure.

Vendor support options will dwindle as well. Independent vendors, software and hardware, will become fewer and further between, leaving end users with more problems to deal with than capable service providers to choose from. With an ever-diminishing number of service providers, SMBs must chart a new course and pursue a new direction in order to maintain their competitive advantage.

More than anything, this change is a call to action. Businesses need to understand where they are, where they need to be and how to get there. The best way to make this transition is with the assistance of a

Microsoft Certified Partner. These organizations have met rigorous standards and possess the technical capacity to bring an SMB from 2003 to 2013. Whether the solution is as simple as purchasing Windows 7 Professional and upgrading to a modern laptop, or as complex as deploying an enterprise solution to larger organizations with in-depth technical resources, tools and expert guidance, SMBs need to consult with Certified Microsoft Partners.

"We saw this transition coming and as a Microsoft Certified Partner we are proactively helping our customers make the transition," stated Mike Shuping, President of TDARx. "It's inevitable for all technology to eventually deteriorate or become obsolete, which is exactly why we came up with C-TAP. Our Current Technology Assurance Plan (C-TAP) protects our customers from the risk of obsolescence and provides them with a unique competitive advantage in their industry. Essentially, we fix the cost of technology and establish a partnership relationship, so rather than 'nickel and diming' our customers when their

technology expires, we continually work to keep them up to date with the latest software and hardware applications for a fixed, predictable cost. By partnering with our customers and adopting a more relationship-based approach, we've been able to maintain long term relationships and everyone is happier, not to mention more profitable.”

ABOUT TDArx, INC..

TDArx, Inc. came into existence when TeleData Services, Inc., a regional leader in business communications, and Arx Technology, Inc., a leading provider of computer and data networking technologies, merged in January 2008. The merger enhances TDArx's expertise in a full line

of communication technology, which helps its customers increase their profitability and improve competitive advantage.

TeleData Services, Inc. was founded in 1988 by Mike Shuping with partners Michael Nester and Larry Halsey. For the past 20 years, TeleData Services has been and is committed to establishing and maintaining a dynamic partnership with every customer. Extensive technology and service experience allowed the TeleData Services, Inc. team to develop an understanding of each customer's unique telecommunications requirements, and to respond to those requirements quickly and effectively.

Founded in 2001 by owner Wesley Walker, Arx Technology had been fulfilling the IT needs of Triad

businesses. The company has over 350 customers and eight certified engineers. These professionals have a number of advanced industry certifications including Microsoft, Macintosh, Cisco, Citrix, Novell, and Linux and provides IT-based growth strategies for small and medium businesses. Arx specializes in data, technology and network consulting, security and support.

Today, TDArx is poised to help its customers maximize the return on their investment in communication technology. With TDArx, you can focus on your business, while we focus on your IT! For more information, please contact us at (336) 896-0808 or visit www.tdarx.com.
